

# Quotation Payment Plugin for Hikashop by Brainforge

## **Overview and Optional Features**

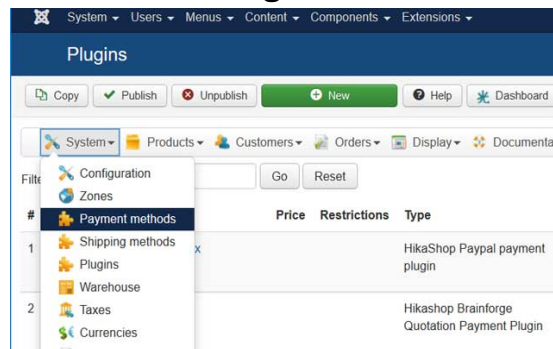

This payment plug-in is intended for use in situations where a quotable delivery and installation service is provided. Once a quote has been accepted payment can be made by whatever means acceptable to both the dealer and customer. Both online and offline payments can be managed through Hikashop in the normal manner.

This payment plug-in is typically used in conjunction with the separate BF Manual Hikashop Shipping plug-in and the similarly named BF Quotation Hikashop plug-in.

Use the standard Joomla functionality to install and enable the plug-in.

In the Joomla extension plug-in manager there are no additional parameters.

## **Hikashop Payment Method Configuration**

# Quotation Payment Plugin for Hikashop by Brainforge

## PayPal Payment Method Configuration Example

First go to the PayPal payment method and restrict that payment method to only fixed price / free shipping methods i.e. those which DO NOT require a quotation.

Return method	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
<input checked="" type="checkbox"/> Restrictions	
Zone	
Shipping method	<div>Standard Delivery - Standard Delivery </div> <div>Free Local Delivery - Free Local Delivery </div> <div></div>
Currency	Standard Delivery - Standard Delivery
Minimum price	Contact us for Delivery - Contact us for Delivery
Maximum price	Free Click & Collect - Free Click & Collect

Repeat this for any other non-quotation payment methods.

## Quotation Payment Method Configuration Example

Specific configuration	
Order status notification	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Return url	<input type="text"/>
Order status	<div>created</div>
Additional information	<input type="text"/>
<input checked="" type="checkbox"/> Restrictions	
Zone	
Shipping method	<div>Contact us for Delivery - Contact us for Delivery </div>
Currency	Type or select some options
Minimum price	<input type="text"/>

In this simple example the Order Status is set to *created*. However, if necessary you can create additional Order Statii more appropriate to your organisation's quotation procedure.

In this example we only have one Shipping Method where a quotation is required. You may have several such Shipping Methods, or even several Quotation Payment methods.

Creating multiple alternative methods like this can be used to display alternative titles / descriptions to the user.

## Checkout Template Overrides

On checkout using the above examples the shipping price will show as 0.0.

This can be changed using Hikashop View Overrides feature.

The BF Quotation Hikashop plug-in provides a more complete solution (see separate help).

#	Client	Template	View	File
1	Front end	beez3-sa	checkout	cart
2	Front end	beez3-sa	checkout	cartstatus
3	Front end	beez3-sa	checkout	printcart
4	Front end	beez3-sa	checkout	show_block_cart

Note: other views where the Shipping Price is output will also require overriding in a similar manner.

Refer to the back end views and emails.

To both the indicated files, where the shipping price is output, add the lines highlighted below.

```
if(!empty($this->shipping)) { ?>
<tr>
<?php echo $td; ?>
<td id="hikashop_checkout_cart_shipping_title"
class="hikashop_cart_shipping_title hikashop_cart_title">
<?php echo JText::_('HIKASHOP_SHIPPING'); ?>
</td>
<td class="hikashop_cart_shipping_value"
data-title="<?php echo JText::_('HIKASHOP_SHIPPING'); ?>">
<span class="hikashop_checkout_cart_shipping">
<?php
if(isset($this->value)) {
echo $this->value;
} else {
$shipping_price = null;
// Start BRAINFORGE for quoteable shipping methods
// See http://brainforge.co.uk/downloads
if (!empty($this->payment) &&
$this->payment->payment_type = 'bf_quotation' &&
!empty($this->payment->payment_shipping_methods)) {
echo 'Quotation to Follow';
}
else
// End BRAINFORGE
foreach($this->shipping as $shipping) {
if(!isset($shipping->shipping_price) && isset($shipping->shipping_price_with_tax) ) {
$shipping->shipping_price = $shipping->shipping_price_with_tax;
}
if(isset($shipping->shipping_price)) {
if($shipping_price == null) $shipping_price = 0.0;
if(bccomp($staxes,0,5)==0 || !$this->params->get('price_with_tax') ||
!isset($shipping->shipping_price_with_tax)) {
$shipping_price += $shipping->shipping_price;
} else {
$shipping_price += $shipping->shipping_price_with_tax;
}
}
}
if($shipping_price != null) {
echo $this->currencyHelper->format($shipping_price,$this->full_total->prices[0]->
$this->full_total->prices[0]->price_currency_id);
}
}
?>
```
